

# Multiply Python

Badkan

October 2019

Multiply is a sample exercise which is intended to help you to understand the general purpose of the website.

This exercise is particularly simple.

In this exercise, you're asked to multiply a number by two.

Write a code in Python 3 that read an integer ( $x$ ) from stdin, and print ( $x * 2$ ).

E.g: for the input 2, your output must be 4.

To read from stdin you can use `input()`

The main function of your code must resides in a file named `main.py`.

You can submit your solution via a ZIP file or a GitHub repository.

A possible answer of this exercise can be found at: <https://github.com/SamuelBismuth/Multiply-Python>
